

## Secure Legacy IBM iSeries AS/400 Servers with iSecurity Firewall and Guardicore Centra

Realize Zero Trust and protect critical workloads running on legacy assets.

IBM introduced the iSeries Application System/400 (AS/400) in 1988. In recent years, the system has included support for new use cases, but this also increases risk when these legacy servers are not isolated from broader, distributed IT environments.

It's crucial for organizations still running critical business workloads on legacy IBM iSeries AS/400 servers to account for them in Zero Trust and general security strategies.

As part of our micro segmentation offering, Guardicore enables organizations running IBM iSeries AS/400 servers to visualize communication flows from these legacy assets with Guardicore Centra and provide firewall and security controls.

Guardicore integrates with the IBM iSeries AS/400 operating system at the exit point level via a firewall agent, enabling you to specify what actions to take on application flows with Centra policies, such as allow, block or alert.

### Key Benefits

- ◆ **Protect legacy assets**  
Isolate IBM iSeries AS/400 servers, reducing risk and preventing unauthorized communications and lateral movement.
- ◆ **Centralized management**  
Create and manage your iSecurity Firewall policies, along with your other security controls for all critical assets from a centralized platform.
- ◆ **All-in-one protection**  
Improve your security posture with policy-based detection, reputation analysis, and dynamic deception techniques.

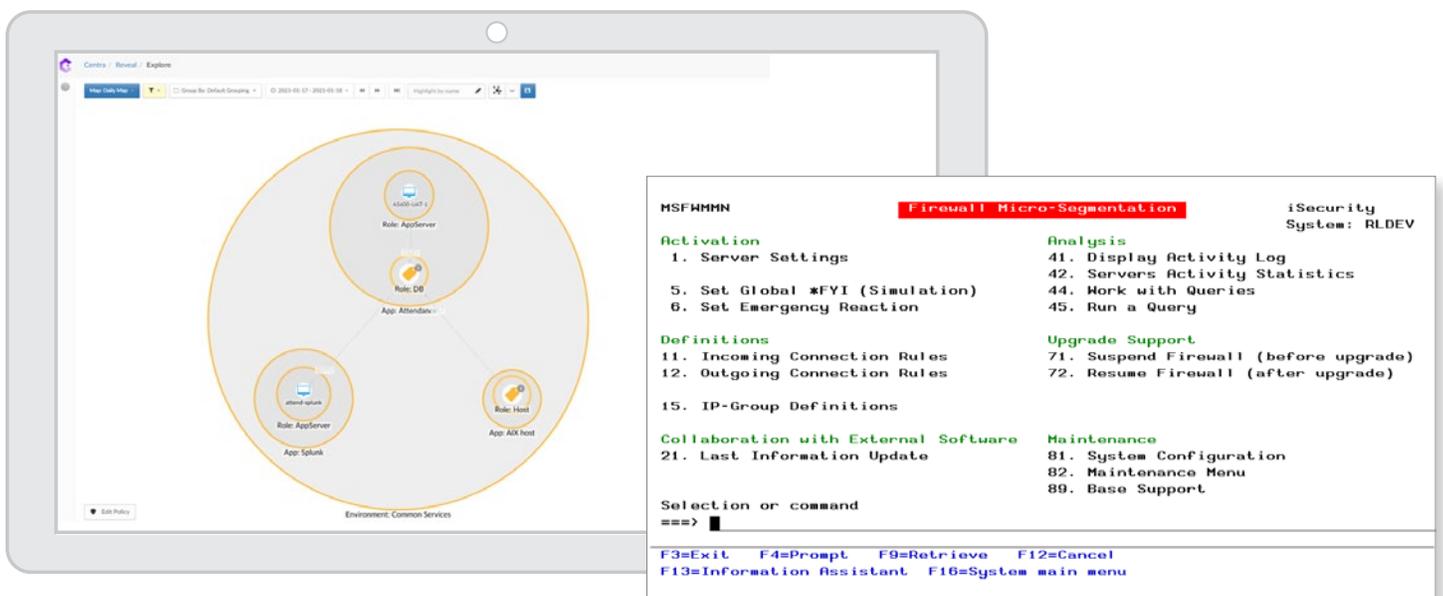

On average, it takes 280 days for an organization to identify and contain a data breach.<sup>1</sup>

## Extend visibility and control to IBM iSeries AS/400 Servers with the iSecurity Firewall and Guardicore Centra

- ◆ Inbound/outbound firewall protection
- ◆ Incoming and outgoing TCP/IP address filtering
- ◆ Remote system (SNA) firewall protection for DDM, DRDA and passthrough operations
- ◆ Powerful intrusion detection and alerting capabilities
- ◆ DHCP request packet validation
- ◆ Definable rule exceptions

### About Guardicore

Guardicore is the segmentation company disrupting the legacy firewall market. Our software-only approach is decoupled from the physical network, providing a faster alternative to firewalls. Built for the agile enterprise, Guardicore offers greater security and visibility in the cloud, data-center, and endpoint. For more information, visit [www.guardicore.com](http://www.guardicore.com) or follow us on Twitter or LinkedIn.
