

Guardicore and Fortinet Fabric Connector Integration

Synchronize and automate security across your entire network

Ensuring your security tools are in lockstep can significantly reduce risk, errors and inconsistencies that may introduce gaps in protection. The deep integration between Guardicore Centra and Fortinet's Fabric Connector Technology provides enterprises with a unified and consistent security layer that's always up to date. This improves security posture and advances Zero Trust network security — even in the face of today's fast-paced operational changes.

Extend unified protection

The joint solution enables organizations to synchronize protection with dynamic operational changes in their environments, extending visibility from on-premises to the cloud and enforcing granular segmentation policies on L4-L7.

It also can apply policy-based firewall controls using east-west traffic inspection, leveraging unified labeling and asset management solutions for internal applications. This combination ensures consistent access controls apply to north-south traffic at the perimeter in addition to internal traffic moving laterally.

The deep integration between Guardicore Centra and Fortinet's Fabric Connector Technology provides enterprises with a unified and consistent security layer that's always up to date.

KEY BENEFITS

Provide consistent security
for modern hybrid environments

Implement a Zero Trust architecture
without expensive tools or resources

Easily deploy in minutes
with turnkey integration

Automate security
to ensure protection keeps pace with DevOps and business innovation

AVAILABILITY

- The Fortinet Connector for Guardicore Centra is available in FortiManager 7.0.1 and above with Universal Connector management extension application (MEA)
- Guardicore Centra 5.0 version 36 and above

How the integration works

Developed by Fortinet, the Fabric Connector technology can activate advanced integrations with just a few clicks. Security administrators can deploy the integration between Guardicore and Fortinet in minutes without the need for hardware or software modifications to the underlying infrastructure.

The integration features a built-in Universal Connector management extension application (MEA) that enables policy automation and provides dynamic object updates between Guardicore Centra and devices managed by FortiManager.

Once configured, you can also retrieve label and asset information from FortiManager and create objects for use in FortiGates policies.

Image 1: Integration of Guardicore labels with Fortinet policies and objects

Through the joint solution provided by Guardicore and Fortinet, organizations can automate and synchronize their security controls in conjunction with dynamic operational changes simplifying overall security management and ensuring protection doesn't get in the way of DevOps processes or bringing innovations to market.

About Guardicore

Guardicore is the segmentation company disrupting the legacy firewall market. Our software-only approach is decoupled from the physical network, providing a faster alternative to firewalls. Built for the agile enterprise, Guardicore offers greater security and visibility in the cloud, data-center, and endpoint.
